

Redesign the Misleading Colored Chart

R.No: 14 Reg. No: 192325036 Name: K. Hema sai Siddartha

Each chart below uses color in a misleading or confusing way. For each one, answer the three questions in your own words.

Chart 1

1. What is this chart trying to show?

It shows the amount of rainfall received in each month of the year.

2. What's wrong with the color choice?

The chart uses many bright and unrelated colors for the bars. The colors make the chart confusing and may suggest different categories even though all bars represent the same variable, rainfall.

3. Propose a better color scheme:

Use one consistent color for all months, such as blue. If color intensity is needed, use a light-to-dark blue scale where darker blue represents higher rainfall.

Chart 2

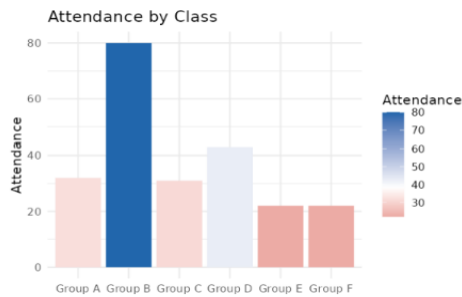

Chart 2 – Attendance by Class

1. What is this chart trying to show?

It shows and compares the number of students attending different classes/groups.

2. What's wrong with the color choice?

The colors are unnecessary and confusing because attendance is already clearly represented by the height of each bar. Different colors can make the viewer think the groups have different meanings.

3. Propose a better color scheme:

Use one consistent color for all bars. If highlighting one group is necessary, use the same color for all bars and a slightly different color only for the group being highlighted.
