

Decode the Chart

Name: K. Hema sai Siddartha (192325036) Roll No: 18

For each chart below, answer: What is it trying to tell you? Do you trust it? Why or why not?

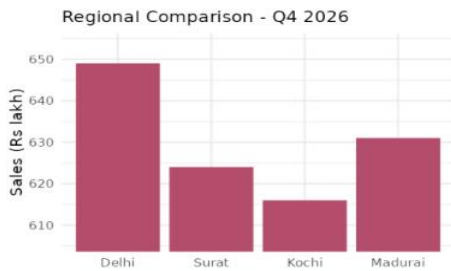

Chart 1

Vote Share by Party (10 categories)

Chart 2

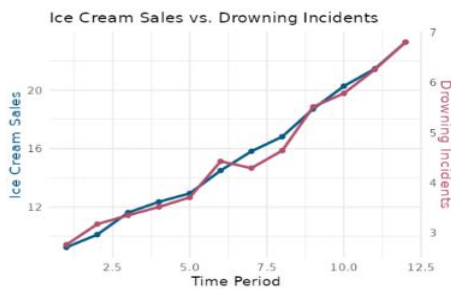

Chart 3

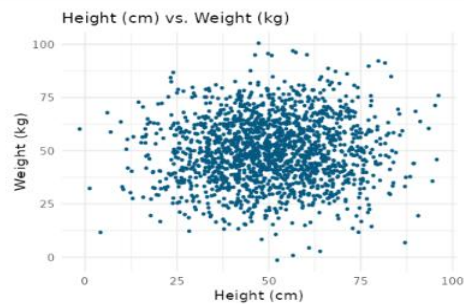

Chart 4

Chart 1

A bar chart titled "Regional Comparison - Q4 2026" displaying sales in Rs lakh across four cities: Delhi, Surat, Kochi, and Madurai. Delhi shows the highest sales, while Kochi shows the lowest. I do not fully trust this chart because the Y-axis does not start from zero. This makes small differences between the bars look much larger than they actually are. A bar chart should normally use a zero

baseline so that the visual size of the bars represents the actual differences fairly.

Chart 2

A pie chart titled "Vote Share by Party (10 categories)" that illustrates the proportional distribution of votes across ten distinct, color-coded slices.

Chart 3

A dual-axis line chart titled "Ice Cream Sales vs. Drowning Incidents". It plots "Ice Cream Sales" on the left y-axis and "Drowning Incidents" on the right y-axis against a common "Time Period" on the x-axis, showing a positive correlation between the two variables over time.

Chart 4

A scatter plot titled "Height (cm) vs. Weight (kg)". It plots individual data points showing the relationship between height and weight, with a dense central cluster around 50 cm and 50 kg.
